

Redirect your Custom Domain to your Single Property Website

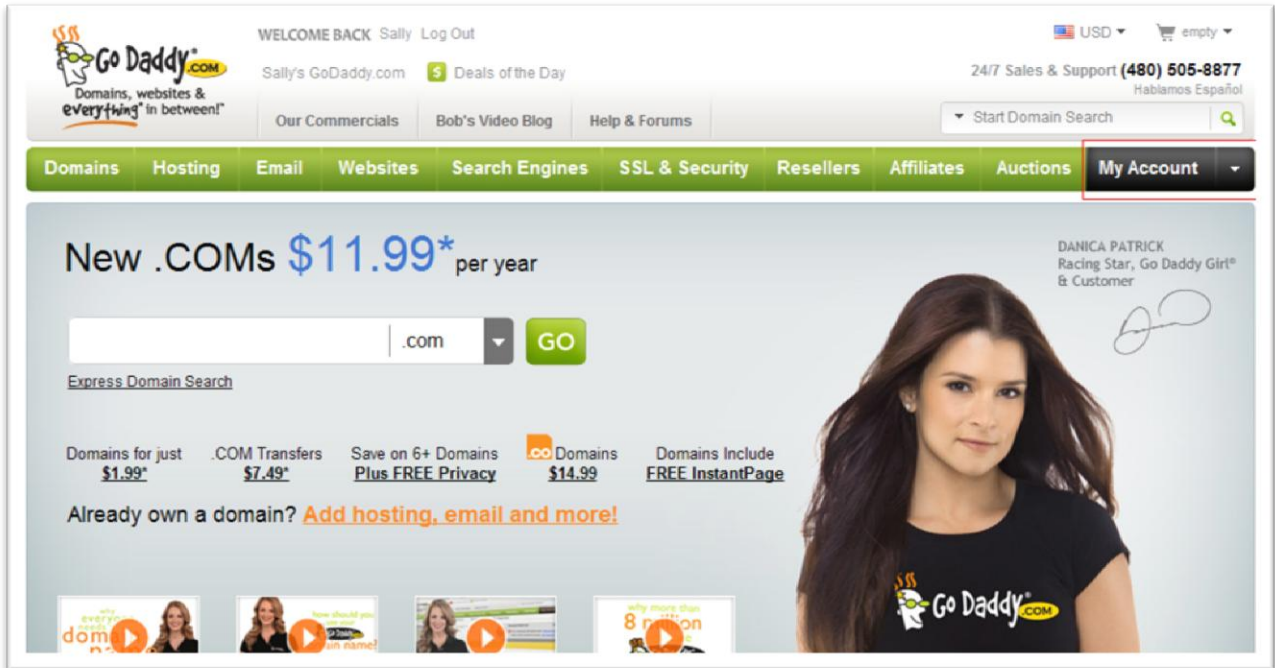

Step One: Log into your GettingListingsSold.com Control Panel and click the view button next to the activated listing for which you'd like to create a custom domain.

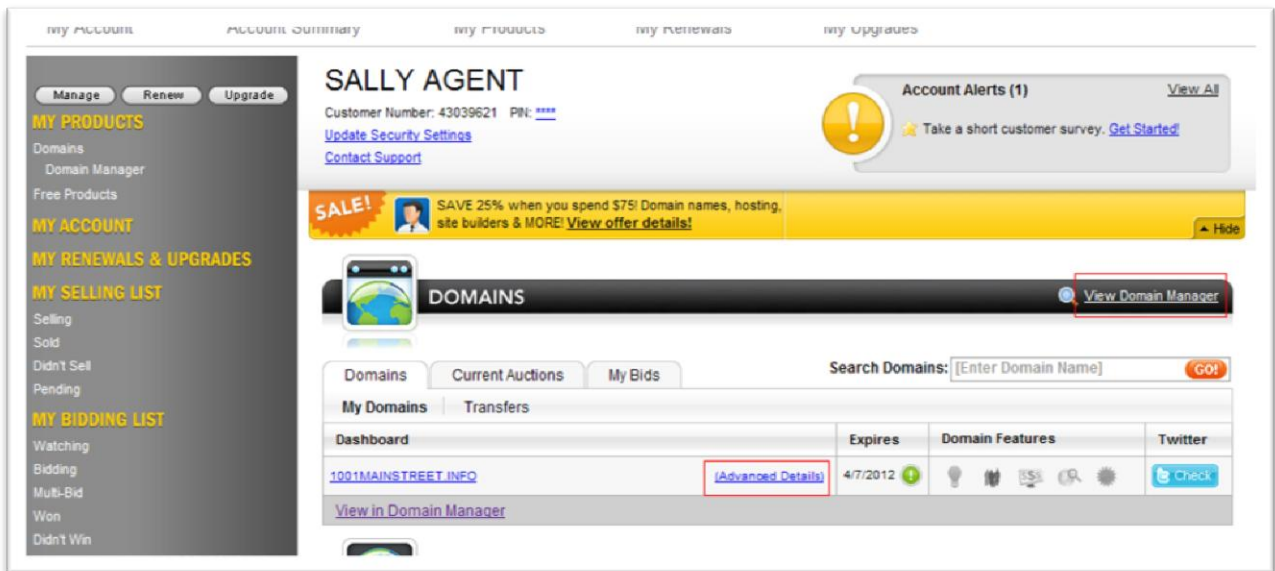

Select the text for your custom domain and copy it to the clipboard so you can later paste it into GoDaddy. The text you select should start with “www” and end with an “8”. To copy text to the clipboard press and hold both the Control Key(Ctrl) and the “C” key simultaneously on a PC or the Command key and “C” key on a Mac.

[insert new picture]

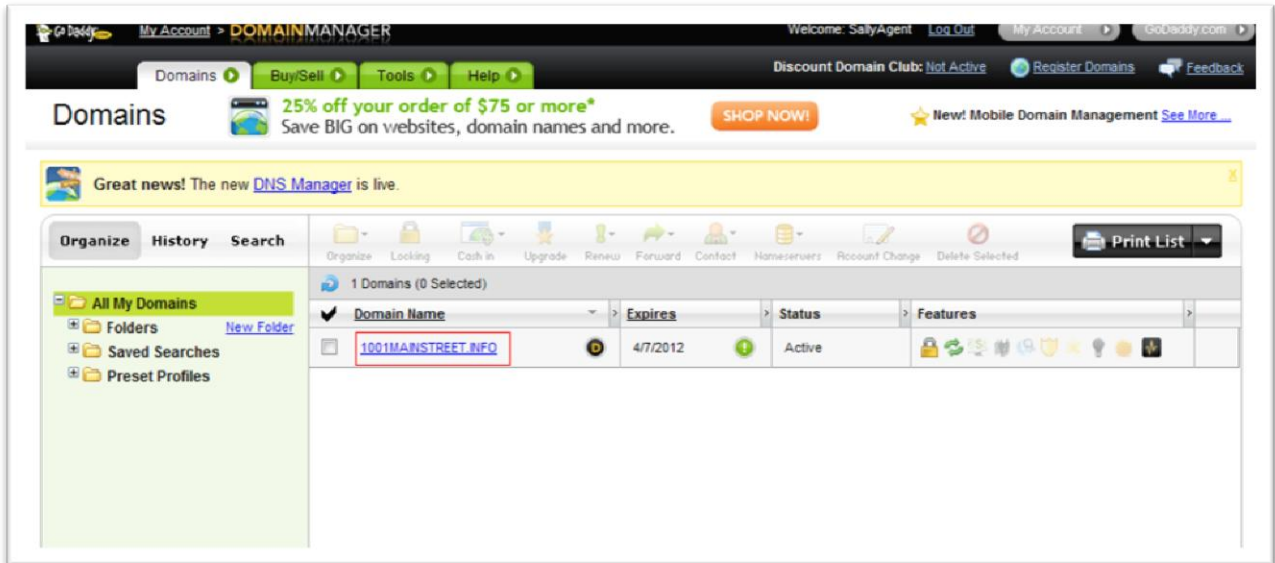

Log into your GoDaddy Account and select the My Account button on the navigation bar

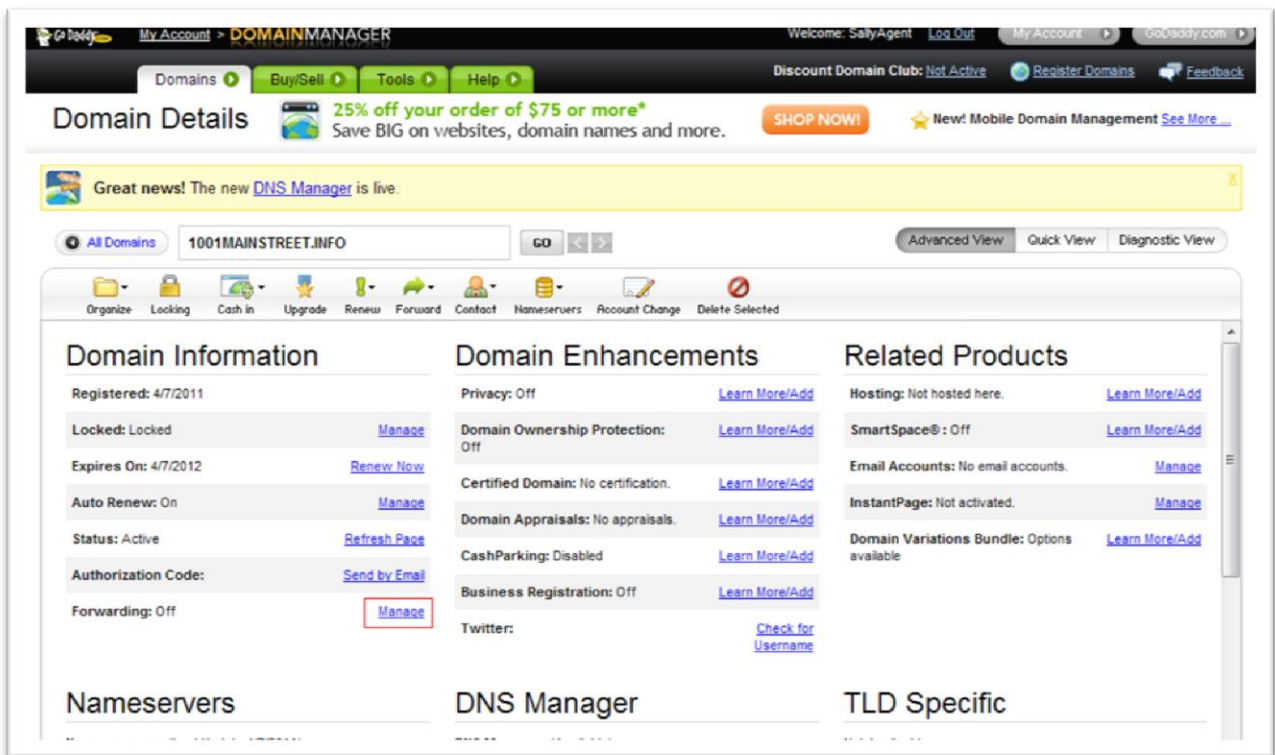

If the domain you're trying to redirect is on the first page of your account page, click the Advanced Detail Link next to the Domain Name. If you do not see the desired domain, click the Domain Manager link near the top of the page.

If you had to click on the Domain manager link, page through the list of you purchased domains until you find the desired domain name and click on the Domain Name link.

On the Domain Detail screen click the Manage link for Forward under the Domain Information Column on the left of the screen.

Paste the Text that you copied to your clipboard into the forward dialog's text box then click the OK button.

Forwarding and Masking

Forward 1001MAINSTREET.INFO to: [Preview](#)

http://

Update my DNS settings to support this change. (Recommended)
